pranavpradeesh.dev | github.com/pranav-pradeesh | linkedin.com/in/pranav-pradeesh-9994a640b

## SUMMARY

Computer Science undergraduate building software since the age of 12, across web, backend and IoT. Four shipped projects, including a full-stack exam platform with AI feedback, the frontend of a school website in daily production use, and a website delivered for a paying business client. Seeking a software engineering internship.

## EDUCATION

**Bachelor of Technology (B.Tech), Computer Science and Engineering**
Nehru College of Engineering and Research Centre (NCERC), Pambady, Kerala, India | 2026 – 2030 (expected)

**Higher Secondary Education**
NMHSS Thirunavaya, Kerala, India | Completed 2026

## PROJECTS

**ExamForge, Mock Examination Platform with AI Feedback**
Next.js 14, TypeScript, Supabase (PostgreSQL), Groq API | github.com/pranav-pradeesh/ExamForge

- Full-stack platform for JEE and VIT entrance preparation: students take timed computer-based mock tests and get an AI analysis of weak topics.
- Built a full-screen test engine with a question palette, answer flagging and automatic submission when the timer expires.
- Designed a 9-table PostgreSQL schema with row-level security on student data and database triggers that create profiles on sign-up and update scores on completion.
- Integrated a Llama model through the Groq API for post-exam analysis and on-demand question explanations; built an admin panel to manage the question bank.

**NMHSS Thirunavaya School Website**
Live in production | React, TypeScript, Tailwind CSS, Vite | github.com/pranav-pradeesh/nmhss-project

- Frontend developer in a team of two for the school's official website, live and in daily use.
- Built the public pages and the admin screens staff use to publish news, events and gallery media, integrating with the backend developer's Express REST API.

**Gas Guard, IoT Gas Leak Detection System**
C++, ESP8266 (NodeMCU), MQ2 sensor, Blynk IoT | github.com/pranav-pradeesh/GAS-GUARD

- Firmware that calibrates the sensor baseline at boot, samples gas levels every 2 seconds, and on a leak sounds a buzzer, opens a servo-driven vent and sends a single de-duplicated cloud alert.
- Embedded HTTP server with a JSON endpoint and live dashboard; falls back to access-point mode when Wi-Fi is unavailable, and supports over-the-air firmware updates.

**Orvaya, Business Client Website**
github.com/pranav-pradeesh/Orvaya

- Responsive marketing website designed and delivered for a business client to their requirements.

## TECHNICAL SKILLS

**Languages:** C++, Python, JavaScript, TypeScript, SQL, HTML, CSS

**Web:** React, Next.js, Node.js, Express, Tailwind CSS, Three.js, REST APIs

**Databases:** PostgreSQL (Supabase, row-level security), MongoDB

**Embedded and IoT:** ESP8266, Arduino, sensors and actuators, Blynk IoT, embedded C++

**Tools:** Linux, Git, GitHub
